

Agito

Dynamic camera movements

The camera dolly excels not only on tracks but also proves its versatility on rough terrain. Thanks to its modular design, this camera dolly adapts perfectly to your needs, allowing smooth camera movements up to a height of two meters – all without lengthy setup times. With this system you get a flexible and cost-effective camera solution that delivers top performance in any situation.

Agito

RemoteCamSystems Datasheet

Technical specifications

- Smooth crawling speeds up to high speeds possible (max. 56 km/h)
- Payload capacity: 32 kg
- Footprint: 96 x 61 cm
- Two axles controllable

Control

- Operated via joystick
- Controlled via wireless or cable connection

Special features

- Power supply via adapter or battery
- Suitable for tracks or uneven terrain
- Available with lifting columns
